Dear Hiring Manager,

I turn complex IT challenges into delivered results and I have been doing it for over two decades, delivering complex technology initiatives across banking, education, and enterprise sectors. I am writing to express my interest in contributing to your organization's project delivery and digital transformation goals.

I have independently used Claude (Anthropic) to build a cross-platform Android application in Flutter and an enterprise-grade LMS in Node.js as proof-of-concept initiatives — demonstrating AI as a practical development accelerator and informing how I guide my teams on AI adoption. I have further embedded AI tools — primarily Claude, alongside Gemini — into my core PM workflows to drive speed, quality, and strategic output, including generating project plans and risk registers, drafting executive presentations, distilling meeting transcripts, creating SOPs and project charters, and streamlining vendor proposal reviews.

Throughout my career, I have managed end-to-end project lifecycles spanning strategic oversight, stakeholder alignment, vendor negotiations, and ground-level execution. Key highlights of my experience include:

- Led delivery across steering and core committee levels, translating technical realities into executive-ready communications.
- Managed blended teams of in-house developers and external vendors, ensuring alignment on deliverables, timelines, and quality standards.
- Oversaw day-to-day operations of an organization's CRM and Android application serving a user base of 10,000+, maintaining service continuity and user satisfaction.
- Conducted an external IT and GDPR compliance audit, identifying gaps and driving remediation aligned to regulatory requirements.
- Managed the full lifecycle of a Meta-partnered WhatsApp Business solution, from vendor selection and stakeholder alignment through to successful deployment.

Before moving into leadership, I spent years as a full-stack developer and engineering lead. That technical foundation means I earn the trust of developers, speak fluently with architects, and translate complexity into clarity for executives. At Kalsoft LLC, I led delivery for banks and multinationals across Pakistan — directing cross-functional teams, owning budgets, and driving feasibility for new business.

I am a CS graduate from FAST-ICS, hold an MS in Databases from FAST-NUCES and am open to opportunities in Karachi and remote roles. I would welcome the opportunity to discuss how my expertise in project management, IT operations, and cross-functional leadership can drive results for your organization.

Sincerely,

Taimur Lateef

Senior Project Manager
